

Design, fabrication and installation

Design

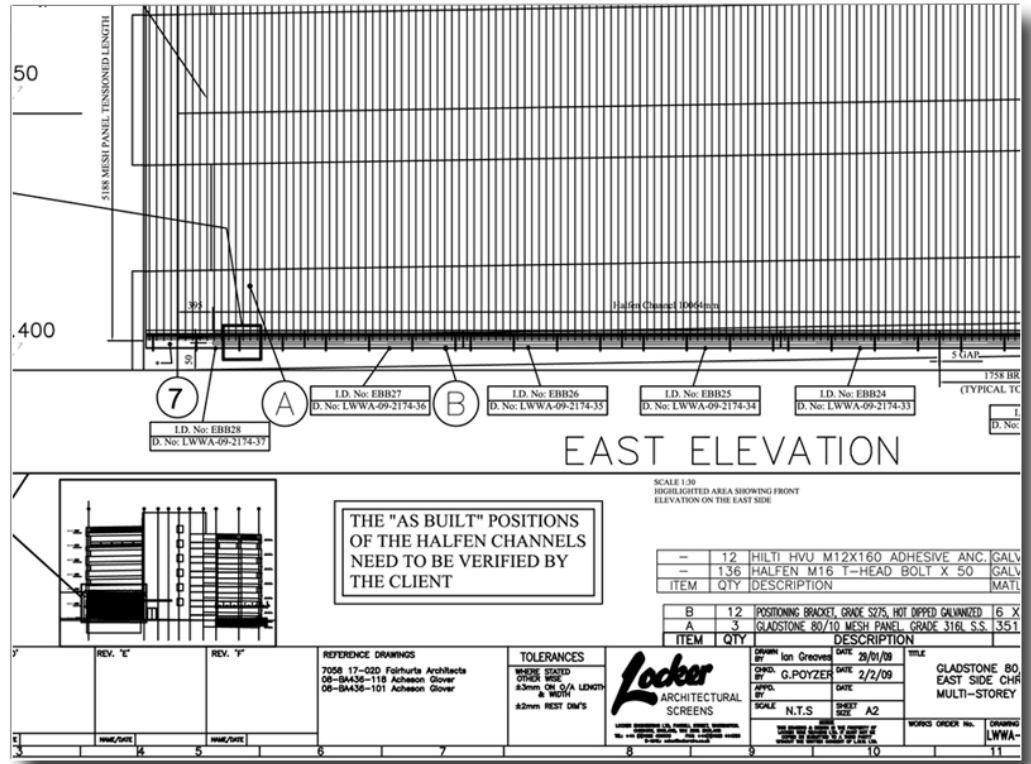

Locker Architectural Ltd provide a team of experienced creative designers, who have many years experience in the field of architecture and engineering.

We draw on our skills to develop a design brief to budget and timescale of a project.

We work at project development stage with architects, engineers and designers producing packages from concept to fully worked designs.

CAD-based analysis and modelling tools allow rapid scheme design and cost information to be understood at an early stage in a project.

Fabrication

Fabricating cladding panels for offshore installation is a most demanding requirement which we have been meeting for more than 30 years.

This experience has enabled us to design and fabricate mesh panels and systems with special edging and frames formed to suit most requirements.

Work on stainless steel is undertaken in quarantined areas.

Installation

Our team of skilled riggers draw on a wealth of experience gained from installing many types of mesh based systems including mesh cladding and tensile structures, curtain walling and security enclosures.

All our riggers are fully trained and carry appropriate certification and licences for powered access, rope access, working at heights, plant operation and banksman operations.
